

CRM Frontend — Knowledge Transfer

A plain-English guide to everything in this app: what each dashboard does, what each feature is for, and who uses it.

Who Uses This App

There are three types of users, each with their own dashboard:

Role	What they see
Teacher	Their own students and class performance
School Admin	All students and teachers in their school
OrcaLex Admin	The entire platform across all schools

Everyone logs in from the same screen. The app automatically sends each user to the right dashboard based on their role.

Login Page

The entry point for all users.

- **Role selector** — Pick whether you're logging in as a Teacher, School Admin, or OrcaLex Admin. The form adjusts based on what you pick.
 - **Teachers** enter their username.
 - **School Admins** enter their school code.
 - **OrcaLex Admins** log in with no extra credentials (demo/internal access).
-

Teacher Dashboard

The day-to-day control center for a teacher. Everything here is scoped to their own students.

The left side has a collapsible sidebar to switch between sections. The main area changes based on what's selected.

Students

A full list of all the teacher's students.

- Each student shows their name, class, section, engagement status, last login date, and how many sessions they've had this week.
 - **Engagement status** is color-coded: green = Active, amber = At Risk, red = Inactive.
 - You can **filter** the list by engagement status, class, or section.
 - You can **sort** by name, last login, or number of sessions.
 - Clicking a student opens their **full profile** (see Student Profile below).
 - You can select multiple students and **send a bulk WhatsApp alert** to all their parents at once.
 - You can also **send a challenge** (a set of AI-generated practice questions) to any individual student.
-

Track Status

Shows how students are progressing on assignments — whether they're on track or falling behind.

- Displays a bar chart broken down into three groups: **On Track**, **Slightly Off**, and **Completely Off**.
 - You can filter by a specific topic or assignment.
 - Click any bar to expand it and see which individual students are in that group, along with their scores for that topic.
-

Scheduled Assignments

A calendar showing all assignments that have been given to students.

- Assignments appear on the dates they're due.
 - Each card shows how many students were assigned, how many viewed it, and how many submitted.
 - Clicking an assignment jumps straight to the Track Status view filtered for that topic.
 - You can filter by subject or section.
-

Daily Quizzes

A list of all homework/quiz assignments.

- Shows the title, subject, chapters covered, date assigned, due date, and how many students submitted.
 - Click any quiz to see a table of which students submitted and when.
-

Weekly Exams

A list of all exams created by the teacher.

- Shows the exam name, type, how many students it was assigned to, how many attempted it, and the class average.
 - Click any exam to see a ranked list of student attempts sorted by score, with time spent and submission date.
-

Mock Exams

Results from full mock exams (like practice board/entrance exams).

- Filter by class and section to narrow the list.
 - Click any exam to see a results table with each student's score, time spent, and submission date.
 - Scores are color-coded (red = low, green = high).
 - You can download results as an Excel file.
-

Mock Exam Analysis

A deeper analytical view of mock exam performance across the programme.

- **KPI cards** at the top show totals: how many exams were created, total submissions, and the weighted average score.
 - Below that, a full table of every exam with detailed stats.
 - You can see **score distributions** (how many students scored in each band: 0–20%, 20–40%, etc.).
 - **Subject breakdown** shows performance split by Maths, Science, etc.
 - **Student flags**: automatically highlights students who finished suspiciously fast with perfect scores, or students who rushed and scored very low.
-

Compare Mock Exams

Side-by-side comparison of two mock exams.

- Select a class/section, then pick two exams to compare.
 - See score distribution charts for both exams next to each other.
 - See individual student score changes between the two exams — who improved, who dropped.
-

Pre-Assessment (Spot Check)

A view of student performance on test prep / pre-assessment activities.

- Filter by chapter, class, section, minimum number of attempts, or a minimum score threshold.
 - The table shows each student's number of attempts, best score, average score, and the date of their last attempt.
-

Activity Feed

A chronological log of everything that's happened — a live timeline.

- Shows student logins, quiz attempts, exam submissions, homework completions — all in order.
 - Each entry shows the student's name, what they did, the subject, their score, and the time.
 - Organized by day so you can quickly scan what happened recently.
-

Student Profile (opens from Students tab)

A detailed pop-up for any individual student.

- Basic info: name, class, section, engagement status, last login.
 - Activity summary: total sessions, sessions this week, whether they're currently online.
 - Recent scores from gap analysis activities and exams.
 - A line graph showing their activity level over time.
 - A breakdown of their test prep results by subject and chapter.
-

School Dashboard

For school administrators. Same core features as the Teacher Dashboard but covering the **entire school** — all teachers, all classes, all students.

Header Metrics

Large cards at the top showing school-wide numbers at a glance:

- Total students enrolled
 - Students active this week
 - Students currently in a live session
 - Students at risk
 - Inactive students
 - Engagement trend (going up or down vs. last period)
-

Students (School-wide)

The same student table as in the Teacher view, but showing all students across all classes and teachers.

- All the same filtering, sorting, and bulk alert features apply.
-

Spot Check (School-wide)

Pre-assessment/test prep results for all students in the school.

- Same filters as the teacher version (chapter, class, section, score thresholds).
-

Activity (School-wide)

The full activity feed for the entire school — every student and teacher.

Timeline

Upload a teaching schedule or lesson plan in CSV format.

- Drag and drop a CSV file and the app parses it automatically.
 - Displays: teacher name, week, date range, subject, topic, learning objectives, and resources.
 - Helps admins track what's being taught and when.
-

Analytics Charts

Donut charts showing the engagement split (Active / At Risk / Inactive) across the school.

- One chart per teacher or per class section.
 - Lets admins quickly see which teacher's students are most/least engaged.
-

Recent Alerts

A quick list of the most recent WhatsApp engagement alerts that were sent, with an option to resend any of them.

OrcaLex Admin Dashboard

The platform-wide view for the OrcaLex team. Everything is visible here — all schools, all students, all teachers.

Platform Metrics

Cards showing totals across the entire platform:

- Total schools
 - Total students
 - Total teachers
 - Active sessions right now
 - Breakdown of Active / At Risk / Inactive with percentages
-

Students (Platform-wide)

All students across every school.

- Can filter by school or by how many days since last login.
-

Teachers (Platform-wide)

All teachers across every school, with the same filtering options.

Activity (Platform-wide)

Activity feed for any school — select a school from a dropdown to view its specific activity timeline.

Analytics (Platform-wide)

Multiple donut charts — one per school — showing each school's engagement distribution.

Scatter Plot

A visual chart that plots student **engagement** on one axis against **score improvement** on the other.

- Useful for spotting which schools or students are improving despite low engagement, or vice versa.

Shared Features (available across dashboards)

WhatsApp Alerts

Send a pre-written engagement alert to a student's parent via WhatsApp. Works for single students or a bulk selection.

Send Challenge

Generate a custom set of MCQ practice questions for a student on the spot.

- Pick a subject, an optional concept, and how many questions (1–10).
- The app generates the questions using AI, shows a preview, and sends them to the student.
- Math equations are rendered properly in the preview.

Engagement Status

Every student is automatically classified into one of three states based on their recent activity:

- **Active** — logged in and doing work recently
- **At Risk** — hasn't been active for a few days
- **Inactive** — hasn't logged in for a significant period

This classification drives the color-coding throughout the entire app.

Help Bar

Each section has a small info strip at the top explaining what that section does and what to look for. It's context-sensitive — it changes based on which tab you're on.

Quick Reference — Which Dashboard Has What

Feature	Teacher	School Admin	OrcaLex Admin
Student list	Own students only	All in school	All on platform
Engagement status & alerts	Yes	Yes	Yes

Mock exam results	Yes	—	—
Mock exam analysis	Yes	—	—
Compare exams	Yes	—	—
Pre-assessment / Spot Check	Yes	Yes	—
Activity feed	Yes	Yes	Per school
Track status	Yes	—	—
Scheduled assignments	Yes	—	—
Daily quizzes	Yes	—	—
Weekly exams	Yes	—	—
Timeline upload	—	Yes	—
School-wide analytics	—	Yes	All schools
Platform scatter plot	—	—	Yes
Teacher list	—	—	Yes
